

## Review

M&S Exercise 10.17: Most of the triggering environments in Brill (1995a) refer to preceding context. Why? Would you expect the same tendency for languages other than English?

■

M&S Exercise 10.18: The set of possible triggering environments for words and tags is different in (Brill 1995a). For example, "one of the three preceding tags is X" is admissible as a triggering environment, but not "one of the three preceding words is X." What might be the reason for this difference? Consider the differences between the sizes of the search spaces for words and tags.
